ALPHATALK PUSH-TO-TALK

TAA Compliant USB Push-To-Talk Headset With Quick Disconnect

ALPHATALK HEADSET IS AN EASY TO USE PC HEADSET

AlphaTalk headsets are developed with light materials for optimal comfort even through many hours of wear. The AlphaTalk headset comes with a 270-degree rotatable microphone and noise cancellation features. Foam earpads are covered in synthetic leather for added comfort and easy maintenance. Includes a hanging headset holder (with 3m tape for adhesion to a desk) and a removable lapel clip to keep the inline volume controls within reach.

Push-To-Talk (PTT) Feature

AlphaTalk Push-To-Talk, also known as press-to-transmit feature enables the user to start communication at the push of the button so your callers will only hear what you want them to hear and nothing else. The button must be engaged the entire time to transmit and the moment you are NOT pushing the button communication is stopped.

TAA Compliant

Decrease vulnerability to security breaches. DataLocker's AlphaTalk is a TAA Compliant headset that protects you from a breach or leak of sensitive data.

Better Conversation

The most important function of a headset is to eliminate background noise and let callers hear your voice clearly. AlphaTalk's microphone delivers crystal-clear conversations for closer connections with your caller. Eliminates background noise for clearer conversations with passive noise cancellation.

Broad Compatibility

Compatible with common calling applications across almost all platforms and operating systems: Windows 7/8/10/11, Mac OS X, and other devices with USB.
